# Luminance

Time-Sensitive Large-Scale Document Review

大成 **DENTONS**

Operating across 200 locations in over 80 countries, Dentons is the world's largest law firm.

Dentons' Dubai office was tasked with a vast, time-sensitive document review. Whilst initially the client believed the project would involve around 200-300 documents, this soon encompassed over 180,000 documents. To help complete this huge task in just two weeks, Dentons turned to the power of Luminance's AI following a recommendation from within the firm.

Understand the entire dataset at a glance with Luminance's AI-powered data visualisation

One of the key reasons Dentons opted for Luminance was the power offered by Luminance's core AI, which uses a unique blend of supervised and unsupervised machine learning algorithms that can read and form an understanding of documents. It then rapidly surfaces anomalies and highlights important aspects of the data. Further, Luminance is language- and jurisdiction-agnostic, allowing Dentons to work across English and Arabic documents with ease.

Dentons also opted to use Luminance for the platform's project management and collaboration capabilities. With the team working primarily out of the Dubai office but also collaborating with a UK office, it was important to Dentons that there was no duplication of work effort and no documents were missed during the review.

KEY RESULTS:

🕐 **80% Time-Savings**

📅 **Review Time Reduced**
From 2 months to 2 weeks

📄 **180,000+ Documents** Reviewed

Dentons cited Luminance's Tasks tools as key in helping them manage the project across international teams. These allow for documents to be grouped, auto-assigned and tracked in real time. Luminance's workflow tools also equipped advisors to work with and within documents, never removing them from the context of the review and allowing them to view key information across the entire project. Given that the team was only afforded two weeks to complete the review, Dentons was impressed with Luminance's speed of deployment and ease of use. Luminance requires no time-intensive set up, pre-programming or lengthy user onboarding. In fact, users typically begin their review within hours of document upload. This was critical to Dentons given the time constraints. Dentons estimated that a manual review of this dataset would have taken the three reviewers around 60 working days to complete. However, with Luminance, the team was able to review the huge document set in its entirety, confident that they were fully appraised of all information, and within the extremely tight timeframe.

"We decided to make Luminance the standard document review platform for all our projects going forward."
